

Technical Bulletin DVS 2942

Welding current measurement in resistance welding

Measuring instruments – Current measuring coils – RMS values

Technical Committee of the DVS

Working Group V 3 “Resistance Welding”

Subgroup V 3.6 “Measuring and process control”

This publication has been drawn up by a group of experienced specialists working in an honorary capacity and its consideration is recommended. The user should always check to what extent the contents are applicable to his particular case and whether the version on hand is still valid. No liability can be accepted by the DVS – Deutscher Verband für Schweißen und verwandte Verfahren e.V., and those participating in the drawing up of the document.

Content:

1.	Aim of the technical bulletin	4
2.	General information on welding current measurement	
3.	External welding current measuring instruments	5
4.	Applications of the welding current measuring instruments	6
4.1.	Use with welding controls without current regulation	6
4.2.	Use with welding controls with current regulation	6
4.3.	Use with welding controls with adjustable current regulation	7
4.4.	Use of simple welding current measuring instruments	7
4.5.	Selection criteria for external welding current measuring instruments	8
5.	Current measuring coils	9
5.1.	Theoretical basics of current measuring coils	9
5.2.	Accuracy of the current measuring systems	12
5.3.	Marking of current measuring coils	15
5.4.	Calibration of current measuring coils	15
5.5.	Types	16
5.6.	Reference sensor	17
6.	Welding current RMS value	19
6.1.	RMS values for alternating current	20
6.2.	RMS values for direct current	22
6.2.1.	Trigger thresholds	23
6.2.2.	Gating of time intervals to derive partial RMS values	24
7.	Definition of the standard RMS values I_{eff} and $I_{eff,k}$	25
7.1.	Welding current RMS value I_{eff}	25
7.1.1.	Effect of current rise and drop times on the total RMS value	26
7.2.	Welding current RMS value $I_{eff,k}$	26
8.	Application examples for welding current measurement	28
8.1.	Welding current RMS values of single-pulsed welding	28
8.1.1.	Single-pulsed welding without programmed current rise and/or current drop times	28
8.1.2.	Single-pulsed welding for the calibration of the current measurement of welding systems	29
8.1.3.	Single-pulsed welding with programmed current rise and/or current drop times	30
8.2.	Welding current RMS values of multi-pulsed welding	31
8.2.1.	Multi-pulsed welding with equal current pulses	31
8.2.2.	Multi-pulsed welding with unequal current pulses	32
8.3.	Examples of RMS values for different current flows	34
8.4.	Welding current RMS values with resistance roller seam welding	35
8.5.	Current measurement with capacitor discharge welding	36
9.	Data in the measurement report	37
10.	Calibration of current measuring systems	38
10.1.	Calibration of welding controls with secondary current measurement	39
10.2.	Calibration of welding controls with primary current measurement	41
10.3.	Calibration of welding current measuring instruments	42
11.	Terms and symbols	44
12.	Literature	47
